

Design task for the workshop at Campus Lecco

Students typically spend most of their days at the University Campus. There, they attend lectures, they meet with colleagues and study together, share their experience and practice with exercises. However, this daily routine can be extremely challenging and wear. Therefore, the management of the campus has decided to invest 50k€ (initial investments) in the creation of a system to entertain students and allow them to live the campus in a more engaging and relaxed mood and up to 5k€ per year to let it work (operational investment). For this purpose, the management has launched a call that challenges students to design such an entertainment system.

The management wants to unleash students' inventiveness and allow them to propose the system they want. The only constraints to be respected are the following ones:

- The entertainment system has to be nicely integrated within the Campus Lecco facilities;
- The entertainment system should foster the involvement of students and citizens from a specific target group (e.g.: children, immigrants, elderly people...) from Lecco city, so as to improve the relationship between the population and students;
- The entertainment system should promote sustainable behaviours, which are also environment-friendly.
