# Weekly CAD Journal for Team Leaders

April, 2020

## Weekly CAD journal for team leaders

- How did the team organised its CAD activities (single, pairs, triplets)?
  - Who is doing what?
  - What was the rationale for organising this work that way?
- Modelling approach
  - How did you approach the modelling? From main products to sub-assemblies and parts or vice versa?
  - Which parts and assemblies are the team currently modelling?
  - Did you have to reorganise the work among team members after checking the work done? Why? (we can think of examples such as: strict deadlines, inadequate CAD models, the excessive workload on some team members, specific modelling skills of some team members...)
  - How difficult was it to model parts and assemblies with the system you used?
- How you organised CAD information exchange?
  - Communication between different team members?
  - Communication about model through CAD/PLM and other platforms?
  - How did you organize the exchange and the retrieval of CAD documents from the suggested tools?
  - Did you experience any delay in the use of these tools?
